

Eunji Lee is a GIST Distinguished Professor in the Department of Materials Science and Engineering at the Gwangju Institute of Science and Technology (GIST), Republic of Korea. She earned her B.Sc., M.Sc., and Ph.D. in Chemistry from Yonsei University, followed by postdoctoral training at Seoul National University and the University of Massachusetts, Amherst, under Prof. Ryan C. Hayward. She began her independent career at Chungnam National University in 2011 and joined GIST in 2018. Since 2025, she has directed the GIST InnoCORE AI-Nano Convergence Institute for Early Detection of Neurodegenerative Diseases and serves as Vice President for External Affairs at GIST. Her research centers on the supramolecular self-assembly of block molecules, using advanced transmission electron microscopy, including cryo-TEM, in-situ liquid-phase TEM, and electron tomography, to probe soft matter structure. She is a member of the Young Korean Academy of Science and Technology (Y-KAST) and sits on the National Nanotechnology Roadmap Committee of the Republic of Korea. Her honors include the Miwon Distinguished Award from the Korean Society of Industrial and Engineering Chemistry (2025), the Asian Young Scientist Award from the Chemical Society of Japan (2020), recognition as a Pioneer Researcher in Polymer Chemistry by the Royal Society of Chemistry (2023), the Macromolecular Division Award from the Korean Chemical Society and the Mid-Career Academic Award from the Polymer Society of Korea (2024), a Prime Minister's Commendation from the Ministry of Science and ICT (2024), a Ministerial Commendation from the Ministry of Trade, Industry and Energy (2022), and recognition among the 50 Outstanding Performances in Basic Research by Korea's Deputy Prime Minister and Minister of Education (2017).
