Brief CV

Dr. Hee-Jung Choi is a Professor in the Department of Biological Sciences at Seoul National University in Korea. She received a Ph.D. in Chemistry from Seoul National University and completed postdoctoral training in Structural Biology at Stanford University. Dr. Choi's research focuses on the structural and functional mechanisms of G protein-coupled receptors (GPCRs), with particular interests in odorant receptors, peptide hormone signaling, receptor subtype selectivity, and structure-guided therapeutic design. The laboratory integrates cryoelectron microscopy, biochemical and cellular assays, and computational protein design to understand receptor activation and develop novel peptide-based ligands. Dr. Choi has authored more than 70 peer-reviewed publications, including 26 papers published over the past five years in journals such as Science Advances and Nature Communications. She has received several academic awards, including the Woman Scientist of the Year Award in Korea, and currently serves as Vice President of the Korean Society for Structural Biology.
