

Molecular dynamics data bank. Current status of the European repository for biosimulation data

The Molecular Dynamics Data Bank (MDDB, <https://mddbr.eu/>) was launched in March 2023 with the goal of establishing the first generic European repository for biosimulation data. After three years, a functional prototype of a distributed infrastructure is now operational. This system now includes nine active nodes contributing MD data, coordinated under a central umbrella database based in Barcelona, Spain, that aggregates content from all contributors. This presentation will provide an overview of the current state of the MDDB, highlight the latest updates and newly implemented features, showcase the MD data already available, and outline the project's roadmap for the upcoming years, including the collaboration with the RIKEN center.
