Molecular Modeling and Bioinformatics (MMB)

Institute for Research in Biomedicine (IRB-Barcelona)

Instituto Nacional de Bioinformática (INB, ELIXIR-ES)

Dr. Adam Hospital is a **Research Associate** in the **Molecular Modeling and Bioinformatics Unit (MMB)** group, hosted by the **Institute for Research in Biomedicine** in Barcelona ([IRB-Barcelona](#)) and computer technician for the **Spanish National Institute of Bioinformatics (INB)**, the Spanish [ELIXIR](#) node (ELIXIR-ES). From 2015, he is leading the **Portable environments for computing and data resources** package of the [BioExcel Center of Excellence](#), mainly focused on interoperable and reproducible biomolecular research workflows. From 2023, he is part of the coordination team for the **European repository for biosimulation data (Molecular Dynamics Data Bank, MDDB)**; <https://mddbr.eu/>.

From a **computer science** background, he jumped to the **bioinformatics** world and got trapped by the fascinating field of **structural bioinformatics**. After finishing the degree, he joined the **MMB** group, where he has been working for more than 20 years. While working as a bioinformatician, he got his PhD in Biotechnology from the **University of Barcelona** with his thesis "*High Throughput Computational Studies of Macromolecular Structure Flexibility*".

He has been involved in more than 50 [scientific publications](#) developed at **IRB** and also at the **Barcelona Supercomputing Center (BSC)**, accumulating more than 4500 citations.

Title: Molecular dynamics data bank. Current status of the European repository for biosimulation data.

Abstract:

The Molecular Dynamics Data Bank (MDDB, <https://mddbr.eu/>) was launched in March 2023 with the goal of establishing the first generic European repository for biosimulation data. After three years, a functional prototype of a distributed infrastructure is now operational. This system now includes nine active nodes contributing MD data, coordinated under a central umbrella database based in Barcelona, Spain, that aggregates content from all contributors. This presentation will provide an overview of the current state of the MDDB, highlight the latest updates and newly implemented features, showcase the MD data already available, and outline the project's roadmap for the upcoming years, including the collaboration with the RIKEN center.
