

Risa Karakida Kawaguchi received her B.Sc. in Bioinformatics and Systems Biology from the University of Tokyo in 2012 and her M.Sc. in Computational Biology in 2014. She completed her Ph.D. in 2017 under the supervision of Prof. Hisanori Kiryu, studying transcriptome-wide RNA secondary structures and their structural constraints. She then worked as a JSPS Postdoctoral Fellow at the National Institute of Advanced Industrial Science and Technology (AIST), followed by postdoctoral training with Prof. Jesse Gillis at Cold Spring Harbor Laboratory from 2019 to 2022. In May 2022, she joined CiRA, Kyoto University, as a Junior Associate Professor. Since 2024, she has also been cross-appointed to the Faculty of Pharmaceutical Sciences, the University of Tokyo. Her research aims to develop integrative approaches for large-scale life science data, particularly in regenerative medicine and stem cell research, using bioinformatics, statistics, mathematical modeling, and machine learning.
