

Dr. Ohnuki is an Assistant Professor at the Institute for Molecular Science, Japan. His research focuses on computational biophysics, particularly the mechanisms underlying biomolecular conformational changes. He received his Ph.D. from the Department of Pure and Applied Physics at Waseda University, Japan, in 2019 and subsequently worked there as a Junior Researcher from 2019 to 2022. At Waseda University, he worked with Prof. Mitsunori Takano to investigate molecular mechanisms underlying the function of molecular motors using MD simulations. In 2022, he joined the Institute for Molecular Science as an Assistant Professor. In 2024, he received the Young Scientist Excellence Award from the Protein Science Society of Japan. He currently works with Prof. Kei-ichi Okazaki, combining MD simulations and AI-based approaches to characterize protein conformational dynamics.
