

Min Ju Shon is an Associate Professor in the Department of Physics and the Division of Interdisciplinary Bioscience & Bioengineering at Pohang University of Science and Technology (POSTECH), Korea. His research focuses on developing single-molecule biophysical methods to investigate the physical mechanisms underlying biomolecular organization and dynamics. His group combines magnetic-tweezers force spectroscopy, fluorescence imaging, quantitative modeling, and reconstituted biochemical systems to study biomolecular interactions, membrane proteins and vesicles, and biomolecular condensates involved in cytoskeletal and synaptic organization. He received his Ph.D. in Physical Chemistry from Harvard University under Adam E. Cohen and subsequently conducted postdoctoral research at KAIST and Seoul National University before joining POSTECH in 2020.
