

Dr. Chen Song is an Associate Professor at the Center for Quantitative Biology and the Peking-Tsinghua Center for Life Sciences, Peking University. He received his Ph.D. in Condensed Matter Physics from Shandong University, followed by postdoctoral research at the University of Western Australia, the Max Planck Institute for Biophysical Chemistry in Germany, and the University of Oxford in the UK. Since becoming a Principal Investigator at Peking University in 2016, he has built a research group focusing on physics- and AI-based computational biology of membrane proteins. His work spans the development of computational methods for biophysics and bioinformatics, elucidating the molecular mechanisms of membrane proteins and peptides, and their prediction and design—including AI-driven tools for membrane protein screening, engineering, and antimicrobial peptide discovery.
