

Kai Huang received his B.S. degree from the Department of Engineering Physics at Tsinghua University in 2009 and his Ph.D. in Materials Science from the University of Wisconsin–Madison in 2015. He subsequently conducted postdoctoral research in the Department of Biomedical Engineering at Northwestern University. In 2020, he joined Shenzhen Bay Laboratory, where he is currently a Principal Investigator with tenure at the Institute of Systems and Physical Biology. His research focuses on interdisciplinary studies at the interface of 4D genome organization, biomolecular phase separation, and AI for biology, with an emphasis on developing theoretical and computational approaches to understand complex biological systems across scales. His work has been published in leading journals, including Nature, Nature Chemical Biology, Cell Research, Science Advances, Nature Communications, and JACS.
